

## Spam or bulk e-mail

If you send spam that originates on our network, our network will be blacklisted, meaning that any Internet Service Provider that subscribes to a spam filtering service will not be able to receive mail from our network.

Sometimes our customers want to advertise their services by sending bulk e-mail. Yes, it can be done, if it is done correctly. When we receive a spam complaint on your domain, we will suspend your service.

[Visit this page for more information on spam laws.](#)
